DIGITAL SELF-DETERMINATION

Here, trust is a switch.

With VluxNet, you decide whom you trust: person by person, device by device. You can give trust. And you can take it back at any time.

Trust
Anna · phone and laptop

1. **Add people**
   You exchange your device keys in person, not through a third-party directory.
2. **Give trust**
   Their devices get access: phone, laptop and PC. Unknown devices stay outside.
3. **Share and take back**
   Folders, photos, music: you share what you want. One click, and it is yours alone again.

Trust is not a box you tick once and forget. You keep it in your own hands.

VLUXNET.

Your own network. No cloud. No open doors.

Self-determined · Private · Independent · Personal

VluxNet turns your devices into a private, encrypted network for you, your family and your office. With a small server of your own at home instead of someone else's data centre.

Be part of it

VluxNet is about to enter the market. We are looking for pilot customers, partners and people who want to come along.

VLUXNET.

The network you trust.

Calls, chat, photos, music, videos and files. Directly between your devices and the people you trust.

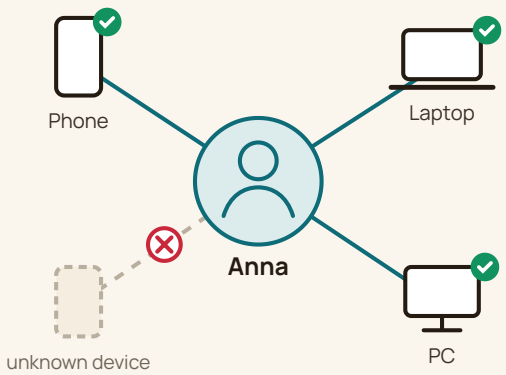

Your life. Your data. On your terms.
NO CLOUD · NO THIRD-PARTY SERVERS

PEOPLE AND DEVICES

People, not accounts.

Behind every contact is a person with all their devices. You can see which phone and which laptop belong to whom.

If you do not trust them, they do not get in: not to your files, not into your chat, not even through to your phone. Your device simply rejects calls from strangers.

Secure, because trust is required.
No device gets anything unless you have trusted it first.

ALL IN ONE

Everything you need.

And nothing you don't: no ads, no third-party server, nobody reading your content.

Calls
end-to-end encrypted, only with people you trust

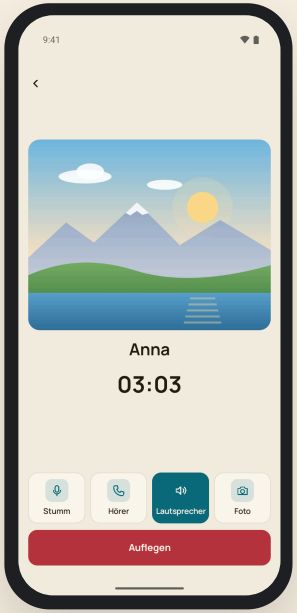

Chat
messages and files, encrypted

Photos
phone photos, safely backed up at home

Videos
your films on every one of your devices

Music
your collection, wherever you are

Files
full access, at home and on the go

Calls, with a photo during the call

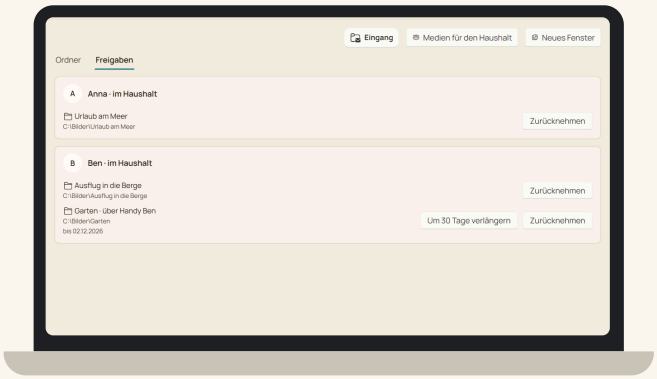

SELF-DETERMINED DATA

Your data. Your rules.

Folders, photos, music or a single document: you share with whoever you want, and take it back just as easily. Sharing works just like trust.

Shared: Family photos
with Anna and Ben

- Everything stays on your own devices, not on someone else's servers.
- Nothing has to be uploaded anywhere.
- On the go, you get in through your own guarded door.
- Works without internet too, on your home network or via a phone hotspot.

On the PC: share and take back
